                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             858
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 918
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SerGlyGlyLeuGlyGlyLeuProSerAsnLeuAsnThrLeuPheSerGlnAlaTrpAsn 119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AATGATGTTGCGCGTGGAATTGTCAAAGCGGATGTGGCTCAGAGCAGCTACGGGTTGTAT 678
                                                                                                                                                                                                                                                                                                                                                                     The invention relates to alkaline proteases produced by strains of Bacillus. The proteases ability to digest casein is not inhibited by oleic acid and they have a high stability to oxidising agents. The alkaline protease of the invention has the following properties: (a) it is active over the pH range 4-13 and has at least 80% of its optimum activity over the pH range 6-11; (b) after 30 minutes at 40 deg. C it is stable over the pH range 6-11; c) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGE. The alkaline proteases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidising agents allows the bleaches. The present sequence represents an alkaline protease encoding DNA. (Updated on 20-MAR-2003 to correct DR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120 AlaGlyAlaArgIleHisThrAsnSerTrpGlyAlaProValAsnGlyAlaTyrThrAla 139

                                                                                                                                                                                                                                                                                                                                                   The invention relates to alkaline proteases produced by strains of Dacillus. The proteases ability to digest casein is not inhibited by oleic acid and they have a high stability to oxidising agents. The alkaline protease of the invention has the following properties: (a) it is active over the pH range 4-13 and has at least 80% of its optimum activity over the pH range 6-12; (b) after 30 minutes at 40 deg. C it is stable over the pH range 6-11; (c) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGE. The alkaline proteases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidising agents allows the branches. The present sequence represents an alkaline protease encoding bleaches. The present sequence represents an alkaline protease encoding DNA. (Updated on 20-MAR-2003 to correct DR field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          27
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents the coding sequence for the protease from Thermococcus celer DSM-2476. This sequence encodes a protease of the invention. The proteases of the invention have extremely high thermal stability. The proteases can be used as research reagents, and industrially in the food, drug and chemical industries. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GlyHisGlyThrHisValAlaGlySerValLeuGly------AsnAlaLeuAsn

```
thermophilic bacterium (especially Pyrococcus furiosus). The protesse has working temperature 40-110 deg.C (optimum 80-95 deg.C), working pH 5-10 (optimum 6-9), and retains more than 90% of its activity after 8 hours at 95 deg.C. The invention also provides gene sequences encoding a polypeptide of formula SIG-Ala-Gly-Gly-Asn-PRO, where SIG is a signal peptide from subtilisin, and PRO is the above protease. Host cells (especially Bacillus strains) transformed with vectors comprising the hyperthermostable protease which can be prepared in quantity suitable for industrial use, can be used as an additive for drugs, washing agents and for chemical synthesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Recombinant hyperthermostable protease from Pyrococcus furiosus - and gene encoding it, for large scale production of the protease for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a hyperthermostable protease derived from a thermophilic bacterium (especially Pyrococcus furiosus). The protease has working temperature 40-110 deg.C (optimum 80-95 deg.C), working ph 5-10 (optimum 6-8), and retains more than 90% of its activity after 8 hours at 95 deg.C. The invention also provides gene sequences encoding a polypeptide of formula SIG-Ala-Gly-Gly-Asn-PRO, where SIG is a signal peptide from subtilisin, and PRO is the above protease. Host cells (especially Bacillus strains) transformed with vectors comprising the genes are used for the recombinant production of the protease. The hyperthermostable protease which can be prepared in quantity suitable for industrial use, can be used as an additive for drugs, washing agents and for chemical synthesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       114

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents the coding sequence for the protease from Pyrococcus furiosus DSM-1638. This sequence encodes a protease of the invention. The proteases of the invention have extremely high thermal stability. The proteases can be used as research reagents, and industrially in the food, drug and chemical industries. (Updated on 17-OCT-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents the coding sequence for the protease from Pyrococcus furiosus DSM-3638. This sequence encodes a protease of the invention. The proteases of the invention have extremely high thermal stability. The proteases can be used as research reagents, and industrially in the food, drug and chemical industries. (Updated on 17 OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GlyArgAsnAspSerSerMetHisGluAlaPheArgGlyLysIleThrAlaLeuTyrAla
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     T; 0 U; 0 Other;

The protease has working temperature 40-110 deg.C (optimum 80-95 deg.C), working phf 5-10 (optimum 6-8), and retains more than 90% of its activity after 8 hours at 95 deg.C. The invention also provides gene sequences encoding a polypeptide of formula SIG-Ala-Gly-Gly-Asp-RRO, where SIG is a signal peptide from subtilisin, and PRO is the above protease. Host cells (especially Bacillus strains) transformed with vectors comprising the genes are used for the recombinant production of the protease. The hyperthermostable protease which can be prepared in quantity suitable for industrial use, can be used as an additive for drugs, washing agents and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence is the Streptomyces viridosporus dhpA gene which encodes an asymmetric hydrolase which acts on 4-substituted-1,4-dihydropyridine derivatives. The enzyme allows the efficient conversion of 4-substituted-1,4-dihydropyridine esters to chiral partially hydrolysed derivatives, for use in the synthesis of cardiovascular drugs suitable for the treatment of e.g. hypertension and ischaemic heart disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GGCTACGACGAGGCGTGAAGATCGCCGTCCTGGACACCGGTGTCGACACGAGGC--- 1054

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence is a fusion gene encoding Streptomyces viridosporus dhpA gene product (an asymmetric hydrolase) which acts on 4-substituted-1,4-dihydropyridine derivatives, and melanin from S. antibioticus. The DhpA enzyme allows the efficient convent of 4-substituted-1,4-dihydropyridine esters to chiral partially hydrolysed derivatives, for use in the synthesis of cardiovascular drugs suitable for the treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Asymmetric hydrolase gene derived from Streptomyces viridosporus - acts on 4-substituted-1,4-di:hydro:pyridine derivatives to produce chiral derivatives useful for synthesis of cardiovascular drugs
                                                                                                                                                                                                                                                                                                                                             ds.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                       US-09-985-689A-5
